Challenging **app development internship** in growing software company, **Princh!**

Are you a **talented and innovative** app developer looking for an exciting challenge that will take your personal and professional **skills to a new level**? Would you like to experience the deep passion, strong team spirit and fast pace of a startup company?

If your answer to the above questions is a **clear "YES"**, then you might be the person we're looking for to join our **ambitious team** as a full-time intern for the autumn semester of 2017.

Briefly about us:

Princh is a software company in the sharing economy space with an **innovative solution** for **cloud printing**. We're active across most of Northern Europe – and we're just getting started! We are an **international team** funded by a Danish investment company and private investor striving to reach our vision: **To kill the home printer!**

Read more about us here: www.princh.com

What you'll be doing:

You will be engaged in the continuous development, improvement and maintenance of our **Android and IOS apps**, in close collaboration with our **developer team**. If we say: **"Java"**, **"Swift"**, short time from idea to production" and "lots of coffee" you should know what to expect.

What we ask of you:

It all starts with **great code** – and you know that very well. We expect you to create (and take a pride in) neat, self-explaining, high quality code. We also expect you to thrive with **small and short development cycles**, rapidly changing tasks and an **informal work** environment. In addition, we expect you to bring a **positive attitude** and be an active **team player**. You are **fluent in English** – speaking Danish is a plus but not a necessity.

What we offer you:

We offer you a unique chance to learn firsthand what it is like to **develop and grow an IT start-up**. You'll be an equal and respected member of our team, working on **mission critical tasks**. If there is a good fit, the internship may lead to a part-time position in the company while you finish your studies, and after graduation, maybe Princh is the place you will kick-start your software development career.

Timing:

The internship period lasts at least ten weeks – but preferably a full semester or longer. **Start, as early as possible and no later than August.**

If the above sounds interesting, don't hesitate to **send your application and CV** to Hans Brink Hansen (hans@princh.com) as soon as possible. If you have any questions about the position, feel free to **contact Hans by phone:** +45 61 39 67 39.

We look forward to hearing from you!
