

Full stack developer - Join a talented and ambitious team and grow your software development skills

Do you have a **passion for building high quality software** that makes a difference for people in their everyday life? Do you want to be part of a team where **your opinion is valued**, and you have **real influence**? Do you want to join a **highly motivated team** and rapidly growing software company?

If your answer to the above questions is a clear **“YES”**, then read on.

Briefly about us:

Princh is a strong player in the sharing economy space with an **innovative solution** for **cloud printing and electronic payment**. We're the leading solution in Northern Europe and growing fast in North America – and we're just getting started!

We are an **international team** funded by professional investors fighting to reach our vision: **Become the printing and payment standard in the public space!**

What you'll be doing:

You **improve and extend the full software stack**, including our **micro service-based backend** and our web, desktop and mobile applications in collaboration with the rest of the development team.

Cool things you'll be working with:

- **Kubernetes, Docker, AWS, MongoDB, RabbitMQ**
- **Java, JavaScript, .Net, Python**
- **Event-driven micro services**
- **The right tool for the right job**

A **typical day** involves building and deploying great code, planning or executing the next sprint, getting and giving feedback while collaborating with **fun and competent people**.

At the end of the day, you will have **made a real difference** for our team, our product and our customers.

What we ask of you:

You're **curious and confident** by nature – yet humble. **You build clean code that works**. You have a positive and strong mind and **fight hard to achieve your goals**.

You enjoy learning and using new technologies while also taking pride in helping others grow. You are a **collaborator** showing **trust and respect for people** with different opinions and skills but know when to assert **your views and ideas**.

You have a **practical mindset** and a **strong theoretical base**.

We expect you to have a **master's degree in computer science** and **maybe some working experience** – alternatively, you have a bachelor's degree in computer science and *significant* working experience.

What we offer you:

We offer you a unique chance to learn firsthand what it's like to **develop and grow a software company**.

Expect to join an **informal and pleasant working environment** with great conditions for growing as a person and a professional. You will be challenged and supported in **continuously enhancing your skills and toolbox**.

Process:

We're looking for just the right person with the right skillset and personality and will be reviewing applications and conducting interviews continuously.
