

QA Specialist

Do you have a passion for ensuring high-quality software that makes a difference in people's everyday lives? Do you want to be part of a team where your opinion is valued, and you have real influence? Do you want to join a highly motivated team in a rapidly growing software scale-up?

If your answer to the above questions is a clear "YES", then read on.

Briefly about us:

Princh is a strong player in the sharing economy space with an innovative, cloud-based solution for document services and electronic payment.

We're active across Europe and North America – and we're just getting started! We are an international team funded by professional investors fighting to reach our vision: Become the printing and payment standard in the public space!

What you'll be doing:

As a QA Specialist, you will play a crucial role in maintaining the quality and reliability of our products and systems. Your primary responsibilities will include:

Bug Tracking

- Identify and investigate product and system issues reported by the support team.
- Translate bugs into actionable issues for the development team to solve.
- Track bugs from report to remedy.

Testing

- Accept-test product & system changes.
- Drive alpha and beta tests of new products and features.
- Perform security tests on applications and endpoints.
- Collaborate with the development team to continuously improve our testing capabilities.

Monitoring

- Monitor new releases.
- Monitor system performance, load, and capacity.
- Track system availability.
- Maintain and further develop automatic monitoring and alarm capability.

QA Process and Compliance

- Drive the continuous development of Princh's processes and policies for quality assurance in collaboration with the product owner, compliance lead, development team, and support team.
- Identify and implement procedures and solutions that further enhance the quality and availability of the service for our customers.
- Ensure processes and policies are adopted and followed by all relevant stakeholders.

Planning

- Ensure that QA is planned into development projects and sprints from the beginning

What we ask of you:

You're curious and confident by nature – yet humble. You have a positive and strong mind and fight hard to achieve your goals. You enjoy learning and using new technologies while also taking pride in helping others grow. You are a collaborator showing trust and respect for people with different opinions and skills but know when to assert your views and ideas.

Additionally, you have:

- Attention to Detail: An exceptional eye for detail to identify issues and ensure quality in all aspects of the product.
- Analytical Skills: Strong analytical abilities to understand and solve complex problems.
- Communication Skills: Good verbal and written communication skills to effectively convey issues and collaborate with team members.
- Problem-Solving Skills: A proactive approach to identifying and resolving issues efficiently.
- Technical Proficiency: Familiarity with testing tools and methodologies, as well as an understanding of software development processes incl. scrum.
- Time Management: The ability to manage multiple tasks and prioritize effectively to meet deadlines.

We expect you to have a relevant degree in computer science or a related field and some experience in QA processes, bug tracking, and testing.

What we offer you:

We offer you a unique chance to learn firsthand what it's like to develop and grow a software company.

Expect to join an informal and pleasant working environment with great conditions for growing as a person and a professional. You will be challenged and supported in continuously enhancing your skills and toolbox.

Process:

We're looking for just the right person with the right skillset and personality and will be reviewing applications and conducting interviews continuously.
